

Networkx Utilites Flordon Road

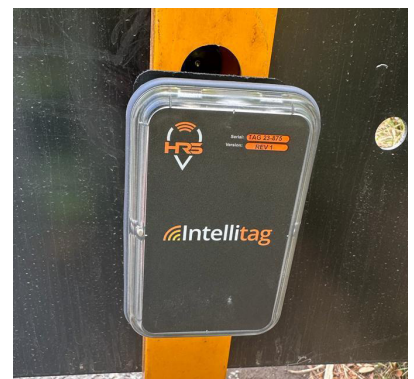

How Intellitag® is future proofing diversion routes

Intellitag® enabled Networkx Utilities to digitise a diversion route on a closure on Flordon Road in Ipswich, this enabled them to digitally monitor the closure 24/7, it even helped them to contest a complaint.

Intellitag® was mounted to all the Tennants Quick-Lock posts on the Flordon Road closure which allowed each sign to be monitored live on our Myworkzone portal. This enabled the Operatives onsite to know if a sign had been compromised and more importantly ensured that residents and travelling public were kept informed of the closure and the available diversion route.

During the closure, Networkx Utilities received a complaint that the road closure signs were missing. As there had been no alert sent by Intellitag® regarding this sign, Networkx Utilities were confident that this information was incorrect. Thanks to Intellitag® and Myworkzone Networkx Utilities were able to view the disputed sign on the portal in real time and obtain a screen shot off the digital platform to immediately contest the complaint.

“Having Intellitag® coupled with the sign face and digital tracking system, myworkzones, is a great tool to have. Allowing 24/7 real-time visualisation, whilst enhancing safety with the digital platform acting as an independent witness to the correct placement of the TM. The added peace of mind that the TM has been placed in-line with the TM Plan and ability to defend against any complaints of inadequate signage are key to the system success. As we move forward with Digital, it plays an ever increasing role to keep our work force safe.”
